

RAPID DIGITAL TO PHYSICAL CONNECTION

The BitRip App and Tape make tracking the physical world extremely straightforward. Rip & stick the tape, scan the unique barcode with the app, and upload any cloud-based data to the tape in seconds. Each ripped piece stores unlimited video links, voice messages, photos, text, hyperlinks, and documents – just one scan away. Additionally, the tape automatically records data from the smartphone when scanned, to include user ID and updated GPS location. This makes BitRip an extremely lightweight, low cost, asset tracking solution.

FEATURES

-  Share labels with a network of unlimited users
-  Integrate BitRip labels with your calendar to set alerts
-  Watch scanned labels update on a live, interactive map
-  Break down language barriers with our text translate button
-  Pre-build digital labels with our CSV import tool
-  Customize who can scan and access data on labels
-  Use our advanced tools to tag, search and filter data
-  Our unique, patented barcode wraps around pipes, wires, etc.

COMMON USES

BitRip is a versatile, rugged "Digital Sticky Note", commonly user for -

- Tool and Equipment Accountability
- Maintenance Records on Assets
- Instructional Videos on Equipment
- Personal Safety Data on Hardhats
- Checklists/Punch Lists
- Inspection Tags
- Scan Log for check in & check out
- Lock out, tag out

Extremely Easy to Use

1 Create

Rip a piece of the tape, attach it somewhere, scan over it, and upload information to it. This information is stored in the cloud and linked to the tape

2 Share

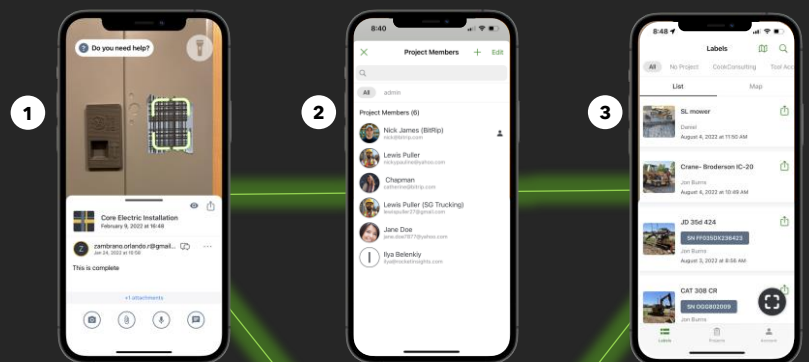

Drag and drop the newly created label into a project so your entire team can instantly access and interact with the data from anywhere

3 Update

Mobile users scan labels, attach updated info, and add status tags

4 Supervise

Monitor the label status – see who scans it, watch its location update, check through the data being attached to it, respond in real-time, close it out and export the data
